EDUCATION

University of Southern California

Los Angeles, CA, USA

Master of Science, Computer Science

Expected Graduation: December 2027

Bachelor of Science, Computer Science / Business Administration

Graduated: May 2026

- **Coursework:** *Applied Python, Data Structures & Algorithms, Software Engineering, Intro to Artificial Intelligence, Database Systems, Discrete Mathematics, IOS Development, Business Statistics & Data Science, Large Software Systems Development*

SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, C++, HTML/CSS, Swift, SQL

Technologies/Frameworks: Vue.js, React.js, React Native, Next.js, Spring Boot, PyTorch, Pandas, Flask, FastAPI, NumPy, Supabase, GitLab CI/CD, Jenkins, PostgreSQL, SQLite, DBeaver, scikit-learn, Redis, Kafka, Claude Code, Docker

EXPERIENCE

Exify+

April 2026 - August 2026

Founding Product/Software Engineering Intern

Los Angeles, CA (Remote)

- Engineered a full-stack valuation simulator using **FastAPI, Next.js, TypeScript, SQLite, and 95 tests**, replacing legacy Excel models to evaluate exit readiness across 2,000+ factors for 100+ companies
- Translated user interviews and product discussions with the CEO, 4 designers, marketing, and 6 SMB founders into scoring-engine and interface requirements, aligning product behavior with stakeholder needs

YD&S

September 2023 – August 2025

Software Engineer (Contract)

Seoul, South Korea

- Shipped backend modules across 8 government data platforms using **Java, Spring Boot, SQL, and GitLab/Jenkins CI/CD**, building logging and aggregation pipelines that powered real-time dashboards for mayors and 1,000+ daily civil servant users
- Delivered public-sector **Vue.js/Vuex (JavaScript)** dashboards—including an emergency alert system for the Environment Ministry—cutting load times 60% (5s to 2s) to accelerate emergency broadcast visibility for critical environmental alerts
- Architected and deployed a guide chatbot for the Korea Racing Authority using Azure OpenAI API, FastAPI, and Docker, integrating LLM capabilities into a production government system
- Curated a Vue.js, Spring, and GIS software curriculum for 5 new hires, accelerating onboarding/time-to-first-commit by 50%

PROJECTS

Slice: Passive Time Tracker & Productivity Coach – ([LA Hacks Hackathon 2026 Submission](#))

[Next.js (Typescript), SwiftUI, Supabase, Anthropic Claude API, Recharts]

- Built a time tracker platform with SwiftUI and Next.js, sharing a Supabase Postgres backend for auth and data across mobile and web clients; Designed a custom SwiftUI honeycomb interface for activity logging and integrated Anthropic API to generate AI productivity insights

MatchPulse: Real-Time Agentic Soccer Intelligence Platform – ([Link](#))

[Python, FastAPI, Redpanda/Kafka, Redis, scikit-learn, Google ADK, Gemini API, Next.js/TypeScript]

- Engineered a distributed real-time football platform (FastAPI, Redpanda/Kafka, Redis) processing match events into tactical analysis via deterministic reducers; stress-tested to ~400 events/sec and 4.37s crash recovery

Journi: Social Travel-Diary & Itinerary-Optimization Platform - ([Github](#))

[Spring Boot (Java), PostgreSQL, React Native, Python, C++]

- Built a social travel app using Spring Boot, PostgreSQL, React Native, and custom C++ caching with a route-optimization engine applying greedy, 2-opt, and simulated annealing algorithms to sequence multi-stop itineraries

RESEARCH

USC Intelligent and Cooperative Autonomy for Robotics (ICAROS) Lab

August 2026 - Present

Robotics Graduate Research Assistant

Los Angeles, CA

- Building a Vision-Language-Action (VLA) steering system in a team of 4, testing text and visual interventions across $\pi 0.5$ policy with (Python) PyTorch, and multi-GPU LIBERO rollouts to improve instruction grounding in robotic manipulation

USC Learning and Interactive Robot Autonomy (LIRA) Lab

September 2025 - May 2026

Undergraduate Research Intern

Los Angeles, CA

- Designed safety curricula with severity-tiered catastrophe regions and ran safe RL experiments in PyTorch, NumPy, and ManiSkill across 12 configurations spanning 3 manipulation tasks to reduce catastrophe intrusions during policy rollout
